

Cracking and collapsing, main fork Hyalite

Hyalite - main fork

Northern Gallatin

1/24/2019

Code

Notes

"Cracking/Whumphing observed on open east [aspect](#) at ~7300' in the main fork of Hyalite Canyon. We also observed what we suspect was a powder cloud across the canyon in the terrain above the Dribbles/Responsible Family Men around midday. It was difficult to be sure looking through the trees."
