

Small wind slabs and good skiing

Date

Sun, 03/30/2025 - 09:15

Activity

Skiing

Skied the Banana today with 8-12" of new snow that has mostly bonded. The snowpack below the new snow had froze over night and was well consolidated.

Observed a layer of graupel (3-4mm grains) at the new/old interface on the NE ramp starting at 8600' and clearing up after 8700'. This layer created some reactivity in the storm snow.

Wind slabs <6" had formed on N and NE aspects. We had one small release in the bottom of the couloir measuring ~10x20' and running ~50'.

Other than that, the skiing was amazing and manageable.

Region

Bridger Range

Location (from list)

Ross Peak

Observer Name

Shep
